1 Most appropriate

We have chosen to make a component test of all our subsystems facadas, this include EventLogic, Season and AccountLogic. We are also component testing EventComponet becouse it is isentiel for transporting data in our system. We have chosen not to make stubs for EventComponent, Account og Notification, becouse to make the stubs work right, we would have to implement almost the same code as the original. Given that the classes are all data classes, we see nothing wrong with it.

2 Test strategy

The strategy we are using is one of the Horizontal integration testing strategies, the bottom-up strategy. Becouse we dit not have enough time to develop to many test-stubs

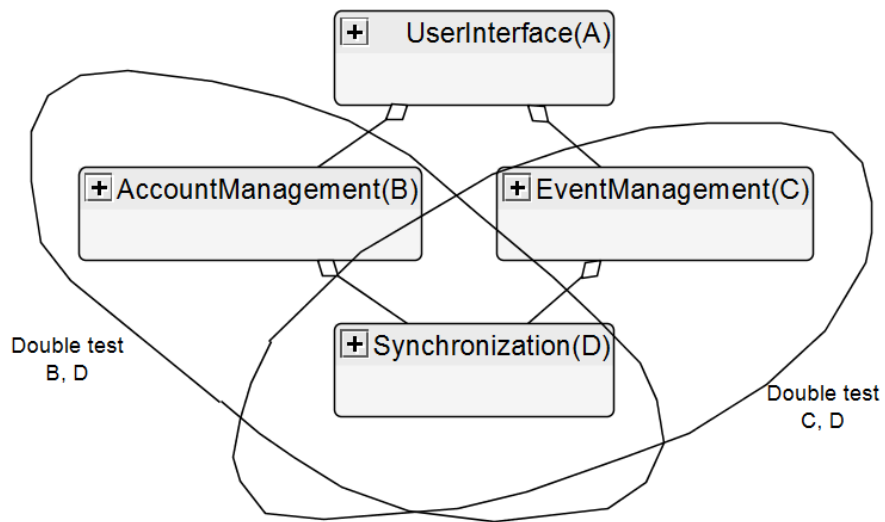

Table 1: Bottom-up test strategy. After unit testing subsystems A, B, C and D, the bottom up integration test proceeds with the double tests B-D and C-D.
